ABOUT US

GB Warehouse Solutions goes beyond pure-play warehousing. We combine core storage with facilities management and specialist height safety solutions to deliver total property care across the UK. Our qualified technicians and engineers enable us to safely reach and service inaccessible high-level areas for maintenance, all while maintaining full compliance with UK health and safety regulations.

We specialise in end-to-end warehouse dilapidations, helping tenants navigate ambiguous lease obligations while minimising exit costs. We integrate asset recovery into our service, purchasing your surplus racking and plant machinery to give redundant fixed assets a second life. This approach extends the lifecycle of industrial equipment, championing circular economy practices that align with current UK sustainability standards.

With our strictly client-centric approach, we don't just offer services; we engineer practical, cost-effective solutions tailored to your unique business needs.

USED RACKING PURCHASE

Turn redundant unused assets into working capital. We purchase second-hand racking and shelving from major manufacturers at competitive rates, handling everything from valuation to safe dismantling. Upon completion, we issue a formal Certificate of Purchase, fully transferring ownership and offloading all future responsibility from you - giving you total peace of mind.

SECOND HAND HANDLING EQUIPMENT BUY

Fixed assets fully depreciated? We buy used forklifts, reach trucks, and material handling fleets. We leverage our deep industry network to identify buyers quickly, ensuring you receive competitive market rates. From valuation to collection, we facilitate a smooth, hassle-free transfer of your assets.

WAREHOUSE DILAPIDATION

Ambiguous end-of-lease obligations often create uncertainty during site exits. We offer a nationwide, end-to-end dilapidation service that satisfies strict landlord requirements while you keep operations running. We handle the entire exit process: purchasing and dismantling racking, stripping out electricals, repairing floors, and deep cleaning. We deliver a fully compliant facility complete with final handover documentation, removing the stress from your property exit.

STORAGE EQUIPMENT INSPECTION

We provide expert racking inspections in line with SEMA (Storage Equipment Manufacturers Association) guidelines.
Our qualified inspectors assess pallet racking systems for damage, compliance, and load integrity—minimising risk and ensuring safe warehouse operations. Each inspection includes a detailed report with photographic evidence, risk categorisation, and actionable recommendations.
Ideal for logistics centres, retail distribution hubs, and industrial storage facilities.

PALLET RACKING INSTALLATIONS

We supply and install Cantilever, Drive-In, Pallet Racking, and Shelving systems—tailored to your operational needs and site layout. Our installations adhere to SEMA-approved methods, ensuring structural integrity, load safety, and full compliance from the outset. Whether it's a new fit-out or reconfiguration, we deliver efficient, regulation-ready racking with minimal disruption.

RACKING & SHELVING MAINTENANCE

We provide expert inspection and maintenance for Cantilever, Drive-In, Pallet Racking, and Shelving systems—ensuring structural safety and operational efficiency. All works are carried out in line with strict SEMA (Storage Equipment Manufacturers' Association) guidelines, helping you meet legal obligations and reduce risk. From damage assessments to remedial repairs, we safeguard your warehouse infrastructure with compliant, professional care.
